

## BEA

### TOUCHLESS DOOR ACTIVATION

NEARLY  
**80%** OF SICKNESS  
CAUSING GERMS SPREAD VIA HANDS

### WHY TOUCHLESS?

Touchless activation provides the most advanced and hygienic form of automatic door activation. These devices can be used on all types of automatic doors to provide an aesthetically pleasing activation solution that maximizes accessibility. BEA offers a complete line of touchless devices to fit any application.

A study by the University of Massachusetts-Amherst demonstrated the vulnerability of door handles by showing the accumulation of bacteria on a door handle only 15 minutes after it was disinfected.

Touchless Activation Devices for doors, activation switches, restroom applications, water fountains and other areas play a key role in reducing the spread of diseases in vulnerable areas.

### The Benefits

- Maintaining a Sanitary Workflow
- Create a trained traffic pattern as each person needs to wave to open the door
- Durable and professionally rated
- ADA Compliant plate that can come equipped with visible and audio features.
- The touches detection zone is adjustable to farther or closer sensitivity depending on the situation the door resides in.
