

NORTON 6300 SERIES

LOW-ENERGY OPERATOR

Norton[®]
ASSA ABLOY

Full-featured operator with slim profile for moderate to high traffic applications.

A unique design with one of the slimmest profiles available allows the 6300 to blend more seamlessly with the frame.

A modular design, simple controls, and a new wifi interface via a mobile device make for easy installation and setup.

APPLICATIONS

Moderate to high traffic openings are ideal applications for the 6300 Series Low Energy Operator. Whether an interior or exterior door, the 6300 Series is a low energy door control solution that allows facilities to meet ADA (Americans with Disabilities Act) requirements by enabling a door to be operated through the use of push buttons, wave switches or hands-free radio frequency devices.

Ideal applications include:

- Hospitals (corridor and entrance)
- Universities (corridor and entrance)
- Schools
- Theaters
- Banks
- Large office buildings
- Large department stores

Functions

- Power Assist: senses the door is being opened
- Push & Go (selectable): As the door is manually opened, the operator “senses” movement and opens door to the full-open position
- Obstruction Detection: Door will stop once it hits an obstruction and will rest against the obstruction until removed
- Motor Startup Delay: Delays operator opening for locking hardware
- Infinite Hold Open: until power is turned off
- Power Close (Selectable):
- Additional closing force to overcome conditions that might otherwise prevent the door from latching (ex: weather stripping, stack pressure)
- Selector mode switch (3 position)
 - Off - door functions as a standard door closer
 - On - door functions as an automatic low energy operator
 - Hold Open - activates the unit to the hold open position
