The Benefits of Access Control and the Different Types

What is Access Control?

In the fields of physical security and information security, access control is the selective restriction of access to a place or other resource. Permission to access a resource is called authorization.

There are many different kinds of Access Control:

- Push button Codes
- Card Swipe
- Key Fobs
- Phone Tags
- Biometric Fingerprint

Why is Access Control crucial?

Access control is crucial to the safety and security of a condo, apartment building or school. In today's society, unwanted and dangerous individuals need to be detected and kept away from your families, tenants and children.

Call FST for consultations about Access Control Solutions!

As consultants, we can provide different options for your school/apartment/or other facility for its access control security.

Extra Security: Electric Strike Releases & Door Closers

If there is a door that slams in an office or even a hospital, it can make a very disruptive noise. A door closer regulates the speed at which the door closes, therefore softening the sound.

Not only can it make a disruptive noise, but the act of slamming can damage the door itself, the hinges, or even affect the walls (and anything hung on the walls) around it.

It is useful in areas where people forget to shut a door, or the door should remain closed as much as possible for privacy/security reasons. Ex: restrooms, restricted areas of the building, stairwell doors, etc.

Products for Residential and School buildings

Schlage HandPunch 3000-E

Schlage brings the accuracy and convenience of biometric technology easily within reach of any time and attendance application. In operations that range from coal mines to clean rooms, the Schlage HandPunch 3000-E has proven itself to be a practical and precise solution.

There are no cards to create, administer, carry - or lose. The HandPunch®3000-E verifies employees' identities based on the unique size and shape of their hands. For mid-size companies, the HandPunch 3000-E provides a high return on investment by eliminating the cost associated with

MT11, MTK15, MTMS15, MTMSK15:

Schlage multi-technology readers - A secure school begins with a secure perimeter. Compatible with magnetic stripe, proximity, and smart cards or an NFC-enabled smart phone. This allows for an easy transition to upgraded technology over time and as budgets allow.

CO-220 Classroom Lockdown Solution

The CO-220 is a standalone classroom lockdown solution that enables the immediate lockdown of up to ten CO-200s within range should an emergency arise. Using a remote fob worn by the teacher, lockdown can occur within 2 seconds of pressing the fob button. An LED visual indicator on the lock signals lockdown status so that teacher and students can keep at a distance from the door. This provides a code compliant solution that always enables free egress even in lockdown mode.
