## *Richmond Square: Three Building Complex*

The first challenge with Richmond Square was to get them off of their compromised key system, and make the lock hardware more secure.

The second challenge is setting up consultations with them to get the complex a new security system, large layout, AV intercom, new facial recognition cameras. This is for resident peace of mind, as they tend to get unwanted persons in their buildings, much to Tennant displeasure. That is a security breach we believe we can solve by bringing more high-tech solutions to their complex.

### *The Solution;*

For the lock hardware, the system is a LT-10 Key, with SFIC. New keys can only be made by FST, and old keys/persons who no longer rent space there must be removed by FST from the system.

## *The Vision for Richmond Square*

*The vision for consultation and implementation at Richmond Square is as follows;*

*Higher security*

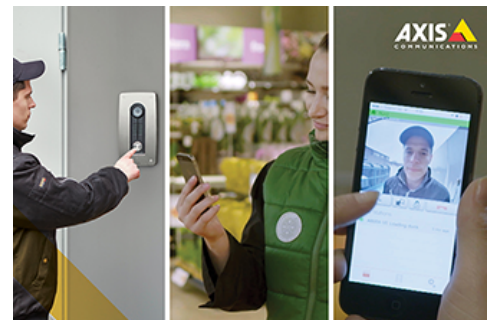

*Bringing their technology up to speed*

*Tenant satisfaction*

*Easier to use digital system*

*Getting Richmond's card access system linked to an Audio/Visual intercom, for the further safety and security of tenants.*

*Set up a Wireless Local Area Network (LAN); as of now the system has no remote-in access, making programming from off-site impossible.*

*Implement cameras with facial recognition, as well as vehicle recognition/license plate recognition for the complex, making incidents easier to report, and possible culprits or suspicious persons more identifiable to authorities.*
