

StepNpull

Contactless Door Opener

StepNpull® is a foot operated door opener that works on any latch-less commercial wood or metal door. Available in four stylish finishes. International shipping.

- Eliminate the spread of germs, prevent cross-contamination, reduce costs.
- Open the door when your hands are full.
- Increase accessibility in your facility.

Why a bottom door opener?

This time period in our lives with Covid-19, a bottom opening door handle where hands do not have to come into contact with a door handle can be paramount. Even once this pandemic has passed, this is a great hygienic addition to any facility.

Are doors too heavy?

The weight of the door is not a factor but rather the amount of resistance the *door closer* provides. The door closer is the device mounted at the top of the door and is responsible for controlling how much effort is required to open the door.

If an interior door closer resistance is adjusted to the ADA standard of 5 pounds or less, then the user will be able to easily open the door with their foot.

Because the StepNpull is mounted on the pull side of the door, it **is** also within **ADA Compliance**.

Technical Specifications

- Width: 5"
- Height: 1.5"
- Depth: 3"
- Weight with mounting hardware: 1/2 pound
- Material: T6 aluminum with 70% recycled aluminum
